

Acc2012220 on London VPS at Alpari UK where 15 CloseRuns occurred for 96% profit in 5 days, totally hands off. The Counter-Trend strategy was trading the EURUSD from Aug 26-10 to Sep 1-10. The preset file was... "eu\_bs-ct-5-fxg\_tpo-20\_ls-1-fibo\_crpp-5" and you can see the settings within the name.

When a CloseRun is triggered an object (rectangle) appears on the EURUSD chart as a vertical bar. You can copy paste the properties of each of those bars into a file as I did just below to look at and evaluate the results of the CloseRuns. I recall that the starting balance and equity was at about \$88,000 but I forgot to note the exact amount at the time. You can see how equity grew from there. Where you see B/S it shows you the number of buy and sell trades that were closed when the Run was closed.

CloseRun #1	ProfitPercent	Equity: \$93213	B/S: 1/10	- 2010.08.26 15:51/16	- 1.2660-1.2755
CloseRun #2	ProfitPercent	Equity: \$93493	B/S: 9/4	- 2010.08.26 17:35/36	- 1.2699-1.2794
CloseRun #3	ProfitPercent	Equity: \$99040	B/S: 5/6	- 2010.08.26 21:54/55	- 1.2665-1.2760
CloseRun #4	ProfitPercent	Equity: \$103874	B/S: 7/0	- 2010.08.27 06:25/26	- 1.2682-1.2777
CloseRun #5	ProfitPercent	Equity: \$109175	B/S: 8/5	- 2010.08.27 16:02/03	- 1.2671-1.2766
CloseRun #6	ProfitPercent	Equity: \$116451	B/S: 2/6	- 2010.08.27 16:05/06	- 1.2643-1.2738
CloseRun #7	ProfitPercent	Equity: \$119909	B/S: 2/10	- 2010.08.27 19:41/42	- 1.2647-1.2742
CloseRun #8	ProfitPercent	Equity: \$121515	B/S: 2/6	- 2010.08.30 08:59/00	- 1.2685-1.2780
CloseRun #9	ProfitPercent	Equity: \$127719	B/S: 7/4	- 2010.08.30 14:41/42	- 1.2675-1.2770
CloseRun #10	ProfitPercent	Equity: \$134336	B/S: 10/1	- 2010.08.30 18:40/41	- 1.2663-1.2758
CloseRun #11	ProfitPercent	Equity: \$141451	B/S: 8/1	- 2010.08.31 03:29/30	- 1.2627-1.2722
CloseRun #12	ProfitPercent	Equity: \$148305	B/S: 6/3	- 2010.08.31 10:17/18	- 1.2608-1.2703
CloseRun #13	ProfitPercent	Equity: \$156392	B/S: 1/10	- 2010.08.31 16:39/40	- 1.2623-1.2718
CloseRun #14	ProfitPercent	Equity: \$165453	B/S: 8/3	- 2010.08.31 21:47/48	- 1.2656-1.2751
CloseRun #15	ProfitPercent	Equity: \$173202	B/S: 4/9	2010.09.01 09:05/06	- 1.2637-1.2732

This account was not monitored nor did it have CRLP (CloseRunLossPercent) or any other obvious stop-loss protection, only TOBT (TotalOpenBuyTrades) and TOST (TotalOpenSellTrades) protection. It margined out after the 15<sup>th</sup> CloseRun. This is a scalping strategy that needs to be traded, monitored and stopped at the appropriate times and profits taken off the table.

When I trade money entrusted to me by my clients with an LPOA (Limited Power of Attorney) I generally ask them to take 10-20% of their trading capital from their main trading account and move it into a secondary account set to a high margin, as much as 500:1 if possible. Then the risk is clear to the clients (10-20% of their overall capital because it was separated out into its own account) and the reward can be very high trading strategies such as the one above.

Extending on the above sample as an example of the potential,  $96\% \times 4.4$  (each month averages 22 trade days / 5 = 4.4) = 422%. So if the client started with 100,000 and put 20,000 in the secondary account and that increased by 422% in a month, then overall the client has gained 84% for that month. In the meantime the main account with the 80,000 can also be traded with a very conservative strategy targeting say 5% per month. Each time the secondary account doubles, you can take say 80% of that profit and move it back to the main account and continue from there. If you lose the 20,000 first time around, then you can start again and maybe with less such as 10,000 until you prove you can profit from that.
